DETAILED ACTION

Claims 36-66 and 68 are pending in the instant application.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on December 22, 2010 has been entered.

Information Disclosure Statement

The Information Disclosure Statement filed on December 22, 2010 has been considered by the Examiner.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 43-55 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for treating a pneumovirus infection, does not reasonably provide enablement for preventing a pneumovirus infection. The specification does not enable any person skilled in the art to which it pertains, or with

which it is most nearly connected, to make or use the invention commensurate in scope with these claims.

The breadth of the claims and the nature of the inventions is to provide a composition of claim 36 in an amount to prevent or treat a pneumovirus infection. The specification shows Examples of compounds of the instant invention to inhibit pneumovirus replication on pages 113-114 in Example 51. The specification also teaches that the compounds of the instant invention are useful in treating and preventing pneumovirus infections in humans as well as livestock. The specification does not define expressly what is meant by the term prevention, and so the term must be given its broadest reasonable interpretation. Therefore, as the claims now read, the claims are drawn to a method to prevent an infection from occurring. An infection can occur when just one virus enters the human body, even if the virus does not produce any symptoms. The specification does not show any evidence that this is possible.

The Applicant has submitted a declaration from Dr. Robert O. Cook which demonstrates that one species within the compounds of claim 36 can indeed show prophylactic activity towards pneumovirus, but does not show where there would be no pneumovirus infection possible with a preventative dose of the compound. Therefore, undue experimentation would be required in order to enable the person of skill to practice the invention to the full scope of the claims since no compound has been found that is able to prevent the ability of pneumovirus from entering a human or other animal's body.

Conclusion

Claims 43-55 are rejected. Claims 36-42, 56-66, and 68 are currently allowable.
